

All of our treatment rooms and the waiting room are supplied with **Surgically Clean Air** systems that neutralize 99.998% of 0.1-micron particles (the average size of all known corona viruses is ~0.14-microns). **Surgically Clean Air** is produced by a 5-stage air filtration and sanitization process: HEPA-Rx MERV-20 Filter, Carbon Filter, Germicidal UV-C, Hydroxyl Reaction).

100% of the air in our office is resupplied with Surgically Clean Air every 15 minutes.

Effectively, every patient and member of staff benefits from healthy personal air.

A vertical graphic divided into two colored sections. The top section is blue and contains the text "YOUR HEALTH IS OUR TOP PRIORITY" in white, bold, uppercase letters. The bottom section is teal and contains the text "ENJOY A BREATH OF SURGICALLY CLEAN AIR" in white, bold, uppercase letters. At the bottom of the teal section is a color calibration strip with six squares (black, dark grey, medium grey, light grey, white, white) and the text "SURGICALLY CLEAN AIR™" below it.
